End-to-End Sales, Distribution, and Customer Engagement Transformation for Food & Beverage Enterprise

Introduction

FreshBite Foods is a rapidly expanding Food & Beverage company that distributes products to retailers and regional distributors across multiple operational areas. As the company continues to grow, several operational challenges have emerged due to the use of fragmented systems, spreadsheets, and manual business processes.

Currently, customer information, distributor records, promotional approvals, and sales tracking activities are managed separately by different departments. This condition creates inefficiencies, data inconsistencies, delays in reporting, and difficulties in collaboration between teams. In addition, executives lack real-time visibility into sales performance, distributor productivity, and promotional campaign effectiveness.

To address these challenges, FreshBite Foods plans to implement Salesforce CRM as a centralized platform to improve operational efficiency, automate workflows, strengthen collaboration, and support data-driven decision-making.

This document outlines the detailed business requirements, functional requirements, non-functional requirements, and user personas necessary for the Salesforce CRM implementation project.

Project Background

FreshBite Foods has experienced significant growth in product demand and regional distribution activities. However, the organization's current operational model is no longer efficient due to:

- Manual order tracking processes
- Fragmented distributor and retailer information
- Slow promotional approval workflows
- Limited collaboration between departments
- Inconsistent reporting methods
- Lack of centralized customer and sales data
- Limited executive visibility into operational performance

These operational limitations affect productivity, delay business decisions, and reduce overall organizational efficiency.

Salesforce CRM is proposed as a digital transformation solution to centralize business operations and improve collaboration across sales, marketing, distribution, finance, and executive management teams.

Business Objectives

The primary objectives of the Salesforce implementation project are:

1. To centralize customer, distributor, retailer, and sales data into a single platform.
2. To improve operational efficiency through workflow automation.
3. To enhance distributor and retailer management processes.
4. To improve sales visibility and revenue forecasting accuracy.
5. To automate promotional approval and follow-up processes.
6. To strengthen collaboration across departments.
7. To provide executives with real-time dashboards and analytical reporting.
8. To support long-term business scalability and digital transformation initiatives.

Stakeholder Involvement

The following stakeholders are actively involved in the project implementation process.

Stakeholder	Department	Responsibilities
Executive Management	Management	Strategic decision-making and project approval
Sales Team	Sales	Managing customer relationships and sales activities
Distribution Team	Operations	Monitoring distributor performance and delivery processes
Marketing Team	Marketing	Managing promotions and customer engagement
Finance Team	Finance	Monitoring revenue performance and budgeting
IT Team	Information Technology	Supporting system implementation and maintenance
Retailers & Distributors	External Partners	Participating in order and distribution processes

Stakeholder	Department	Responsibilities
Customers	External Users	Purchasing products and providing customer feedback

Business Requirements

The following business requirements were identified through stakeholder discussions and operational analysis.

Requirement ID	Business Requirement	Priority
BR-01	The organization requires a centralized CRM platform to manage customer, retailer, and distributor information.	High
BR-02	Sales representatives require real-time access to customer orders and sales activities.	High
BR-03	The distribution department requires automated distributor performance tracking.	High
BR-04	Marketing teams require a standardized promotional approval workflow.	Medium
BR-05	Management requires executive dashboards for revenue forecasting and regional growth analysis.	High
BR-06	The company requires automation for repetitive operational tasks and follow-up activities.	High
BR-07	The platform must support collaboration between sales, marketing, distribution, and finance teams.	Medium
BR-08	The system must provide secure, role-based access for regional operations.	High
BR-09	The organization requires accurate reporting and KPI monitoring capabilities.	High
BR-10	The system should support future business expansion and scalability.	Medium

Functional Requirements

The Salesforce CRM solution must support the following functional capabilities.

Functional Requirement ID	Functional Requirement
FR-01	Create, edit, and manage customer accounts and distributor profiles.
FR-02	Record and monitor customer orders within Salesforce.
FR-03	Track distributor activities and performance metrics.
FR-04	Automate promotional request and approval workflows.
FR-05	Generate dashboards and analytical reports for executives and department managers.
FR-06	Send automated email notifications and task reminders.
FR-07	Maintain centralized customer interaction history.
FR-08	Implement role-based user access control.
FR-09	Manage promotional campaign data and approvals.
FR-10	Enable regional sales monitoring and forecasting analysis.

Non-Functional Requirements

Non-functional requirements define the quality standards and technical expectations of the system.

Category	Requirement
Security	The platform must provide secure authentication and role-based authorization.
Scalability	The system must support future business growth and increasing transaction volumes.
Performance	Reports and dashboards should load efficiently with accurate data.
Availability	The system should be available during operational business hours with minimal downtime.
Reliability	Data consistency and operational stability must be maintained.

Category	Requirement
Usability	The interface should be user-friendly and accessible to all departments.
Maintainability	The system should support future updates and enhancements.

User Persona Development

1 Sales Manager Persona

Category	Description
Name	Daniel Hartono
Role	Regional Sales Manager
Responsibilities	Monitor sales performance and manage customer relationships
Goals	Increase sales growth and improve sales visibility
Pain Points	Limited access to real-time sales information and fragmented customer data
Salesforce Needs	Sales dashboards, customer tracking, forecasting reports

2 Distribution Coordinator Persona

Category	Description
Name	Sarah Wijaya
Role	Distribution Coordinator
Responsibilities	Monitor distributor activities and delivery performance
Goals	Improve product delivery efficiency
Pain Points	Manual distributor tracking and delayed reporting
Salesforce Needs	Distributor monitoring dashboards and automated alerts

3 Marketing Specialist Persona

Category	Description
Name	Kevin Saputra
Role	Marketing Specialist
Responsibilities	Manage promotional campaigns and customer engagement
Goals	Increase promotional effectiveness and customer response rates
Pain Points	Slow approval processes and disconnected campaign data
Salesforce Needs	Campaign automation and approval workflows

4 Executive Manager Persona

Category	Description
Name	Olivia Tan
Role	Executive Director
Responsibilities	Monitor business growth and organizational performance
Goals	Make strategic decisions based on accurate business insights
Pain Points	Lack of real-time visibility into sales and operational KPIs
Salesforce Needs	Executive dashboards and revenue forecasting reports

Expected Benefits

The implementation of Salesforce CRM is expected to provide significant benefits to FreshBite Foods, including:

- Improved operational efficiency through process automation
- Better visibility into sales and distribution performance
- Faster and more accurate reporting capabilities
- Enhanced customer and distributor relationship management
- Improved collaboration across departments
- Reduced manual workloads and operational errors
- Better decision-making supported by real-time data analytics

- Increased customer satisfaction and engagement

Risks and Challenges

Several risks and implementation challenges may arise during the project:

Risk	Potential Impact	Mitigation Strategy
User resistance to new systems	Delayed adoption	Conduct user training and change management
Data migration issues	Inaccurate information	Perform data validation and cleansing
Integration challenges	Operational disruption	Conduct system testing before deployment
Limited user training	Reduced productivity	Provide continuous user support and training

Conclusion

Based on the business analysis conducted, FreshBite Foods requires a centralized and scalable CRM solution to improve sales, distribution, and customer engagement operations. Salesforce CRM provides the necessary capabilities to automate workflows, centralize operational data, improve collaboration, and support executive decision-making through real-time reporting and dashboards.

The successful implementation of Salesforce CRM is expected to strengthen operational efficiency, improve business performance, and support the long-term digital transformation strategy of FreshBite Foods.
