End-to-End Sales, Distribution, and Customer Engagement Transformation for Food & Beverage Enterprise

Introduction

FreshBite Foods is a rapidly growing Food & Beverage enterprise that manages multiple distributors, retailers, promotional campaigns, and regional sales operations. As business operations continue to expand, the organization faces several operational challenges caused by fragmented systems, manual data management, and limited integration between departments.

Currently, customer records, distributor information, sales tracking, and promotional approvals are managed using spreadsheets and disconnected systems. This situation leads to inconsistent data, delayed reporting, inefficient workflows, and limited executive visibility into business performance.

To support digital transformation initiatives, FreshBite Foods plans to implement Salesforce CRM as a centralized platform for managing sales, distribution, customer engagement, and operational reporting activities.

This document presents the proposed Salesforce Data Model Design that supports the organization's business processes, operational scalability, workflow automation, and reporting requirements.

Purpose of the Data Model

The purpose of this Salesforce data model is to create a centralized, scalable, and efficient structure for storing and managing business data within Salesforce CRM.

The proposed data model aims to:

- Centralize customer, distributor, and retailer information
- Improve sales and order management processes
- Support distributor performance monitoring
- Enable promotion and campaign management
- Improve reporting and executive dashboard visibility
- Support workflow automation and approval processes
- Enhance collaboration between departments
- Provide scalability for future business growth

Business Process Overview

The Salesforce platform will support several key operational processes within FreshBite Foods, including:

- Customer and retailer management
- Distributor onboarding and performance tracking
- Sales opportunity management
- Order processing and delivery tracking
- Promotional request and approval workflows
- Customer service and issue management
- Executive reporting and KPI monitoring

The proposed data model is designed to ensure that all operational activities are connected within a single integrated CRM environment.

Standard Salesforce Objects

The following standard Salesforce objects will be utilized to support the organization's business operations.

Salesforce Object	Purpose
Account	Stores distributor, retailer, and business partner information
Contact	Stores customer and stakeholder contact details
Opportunity	Tracks sales opportunities and potential revenue
Order	Stores customer order transactions
Product2	Stores product catalog and inventory information
Case	Manages customer complaints, support requests, and issue tracking
User	Represents internal Salesforce users
Campaign	Stores promotional and marketing campaign activities
Dashboard	Displays KPIs, reports, and executive insights
Report	Provides operational and analytical reporting

Custom Salesforce Objects

To support FreshBite Foods' unique operational requirements, several custom objects are proposed.

Custom Object	Description
Distributor Performance	Tracks distributor sales performance, targets, and KPIs
Promotion Approval	Manages promotional approval requests and approval status
Delivery Tracking	Monitors shipment and delivery status for customer orders
Regional Sales Target	Stores regional sales targets and achievement metrics
Retail Visit Log	Records sales representative visits to retailers
Promotion ROI	Tracks promotion effectiveness and return on investment

Entity Relationship Structure

The following section describes the relationships between objects within the Salesforce CRM platform.

Parent Object	Child Object	Relationship Type	Description
Account	Contact	One-to-Many	One account may have multiple contacts
Account	Opportunity	One-to-Many	One account may generate multiple opportunities
Account	Order	One-to-Many	Retailers can place multiple orders
Order	Product2	Many-to-Many	Orders may contain multiple products
Campaign	Promotion Approval	One-to-Many	Campaigns may require multiple approvals
Order	Delivery Tracking	One-to-One	Each order has delivery tracking information
Account	Distributor Performance	One-to-Many	Distributor performance linked to distributor accounts
User	Retail Visit Log	One-to-Many	Sales users can perform multiple retailer visits

Parent Object	Child Object	Relationship Type	Description
Campaign	Promotion ROI	One-to-One	Each campaign has ROI analysis data

Data Flow Overview

The following process describes how operational data flows within Salesforce CRM.

Step 1 — Customer & Distributor Registration

Sales representatives create distributor and retailer accounts within Salesforce. Contact information and regional data are stored centrally.

Step 2 — Sales Opportunity Management

Sales teams track potential sales opportunities and manage retailer engagement activities.

Step 3 — Order Processing

Retailers place product orders, and orders are recorded within Salesforce for monitoring and reporting purposes.

Step 4 — Delivery Monitoring

Distribution teams monitor delivery progress using the Delivery Tracking object.

Step 5 — Promotion Management

Marketing teams create promotional campaigns and submit approval requests through automated workflows.

Step 6 — Executive Reporting

Executives access dashboards and reports to monitor:

- Revenue growth
- Distributor performance
- Regional sales trends
- Promotional ROI
- Customer engagement metrics

Data Security and Access Model

The Salesforce platform will implement role-based security access to ensure data confidentiality and operational control.

User Role	Access Permissions
Executive Management	Full access to dashboards, reports, and analytics
Sales Manager	Access to sales opportunities, retailer accounts, and order data
Sales Representative	Access to assigned retailer accounts and sales activities
Distribution Team	Access to delivery tracking and distributor performance data
Marketing Team	Access to campaigns and promotional approval workflows
Customer Service Team	Access to customer cases and support information
IT Administrator	Full system administration and configuration access

Scalability and Future Expansion

The proposed Salesforce data model is designed to support long-term organizational growth and scalability.

The model supports:

- Expansion into new sales regions
- Increased customer and distributor volume
- Additional product categories
- Future automation workflows
- Advanced reporting and analytics
- Integration with external systems and applications

The modular structure of Salesforce objects allows FreshBite Foods to continuously enhance operational capabilities without major system redesign.

Expected Benefits

The implementation of the proposed Salesforce data model is expected to provide several operational and strategic benefits.

Operational Benefits

- Improved order management efficiency
- Faster distributor performance monitoring
- Reduced manual data entry and duplication
- Improved collaboration between departments

Strategic Benefits

- Better executive decision-making
- Improved revenue forecasting accuracy
- Increased visibility into regional sales performance
- Enhanced promotional campaign analysis

Customer Benefits

- Faster customer response times
- Improved service quality
- Better customer relationship management

Proposed High-Level Data Model Diagram

Conclusion

The proposed Salesforce Data Model Design provides FreshBite Foods with a centralized and scalable CRM foundation capable of supporting sales operations, distributor management, customer engagement, and executive reporting activities.

By implementing this data model, the organization can improve operational efficiency, strengthen collaboration across departments, enhance visibility into business performance, and support long-term digital transformation initiatives.

The Salesforce CRM platform will serve as a strategic solution that enables FreshBite Foods to become a more data-driven, efficient, and customer-focused organization.
